

Connect your intermodal world

Connections that increase profit

International Asset Systems (IAS) is the global leader in providing intermodal web-based applications and brokerage services. IAS's team of transportation professionals manage the world's largest intermodal information network, spanning thousands of operators and their trading partners including leading ocean carriers, 3PLs, NVOCCs, IMCs, equipment lessors, motor carriers, repair depots, and railroads.

IAS helps clients profit more by reducing equipment, transportation and operational costs, increasing booking fulfillment, and achieving greater transport visibility. The company's suite of on-demand Software-as-a-Service applications can be operated as turnkey solutions accessible on the web or as integrated extensions of a client's transportation management system. Each application is based on industry best practices and can be implemented quickly, enabling clients to realize significant benefits immediately, while avoiding costly investments in technology and resources.

Global first and last mile visibility

Thousands of users in countries worldwide are connected to the IAS Hub, a single repository tracking millions of intermodal events from the first mile to last mile, creating operational transparency and visibility that satisfies the growing need for access to timely information across the transport chain. IAS makes getting connected fast and easy, and you can start enjoying greater profits sooner by leveraging connections to your partners that are already integrated to the IAS Hub. IAS delivers SaaS (Software-as-a-Service) solutions via the web using highly

scalable, world-class technology based on Oracle® database software and other best-of-breed tools. IAS SaaS solutions are delivered through a leading data center service provider that meets rigorous Tier-3 technology infrastructure standards,[†] featuring a wide range of redundant system measures that ensures system availability around the clock and around the world. To ensure your confidence and peace of mind, IAS provides one of the transportation industry's leading service guarantees, committing high system availability backed by a support team that makes it their mission to keep your business running smoothly.

Service that creates success

As part of each client engagement involving SaaS solutions, IAS consultants collaborate with your staff to perform a detailed operational review that identifies the optimal solution and approach to meet your business and systems requirements, and quickly connect you with your intermodal partners. The company's team of experienced professional service and support personnel make your satisfaction their goal using a proven formula for success.

IAS project managers develop and manage detailed plans; transportation industry experts contribute value and best-practice operational know-how while exercising world class implementation practices that produce results in the least possible time. Once you begin using IAS solutions, the service commitment continues throughout your relationship with IAS. Whenever you need assistance, you can count on receiving personal support 24/7 through Global Client Service centers.

Discover how IAS solutions can help you:

- Generate revenue
- Minimize transport costs
- Achieve greater asset visibility
- Boost productivity
- Lower carbon emissions
- Make smarter equipment and transportation decisions

Increase profit on every equipment transaction

IAS Company Overview

Connect your intermodal world

Integrated Web Solutions

IAS on-demand SaaS solutions are easily accessible via the Internet using a standard web browser. There are no expensive start-up, administrative or ongoing system-related costs, and every IAS service provides a compelling, measurable return on investment (ROI).

DispatchManager

Connect to your drayage

community to dispatch work orders

Simplifies the process of dispatching work orders between ocean carriers, 3PLs, NVOCCs, BCOs and their trucking company partners. DispatchManager replaces the costly process of issuing drayage moves via email, fax, and phone by automating communications across the entire workflow – from issuing the dray move to sending Proof-of-Delivery (POD) and invoicing. Since the details of each work order are captured and visible to originators and their trucking partners, both parties can boost their productivity by spending less time reconciling invoices and disputing fees, including per diem and assessorial.

The valuable information collected allows originators to track the performance of their trucking partners so they can easily identify and direct business to the most effective providers, reducing the originator's overall transportation spend. With DispatchManager, originators can save money on every intermodal dispatch, through increased productivity and lower transportation costs. DispatchManager is available in three configurations:

DispatchManager PRO - Streamlines drayage management with a turnkey system

DispatchManager ENVOY™ - Improves drayage management using your own transportation system

DispatchManager DRAY™ - Enables trucking companies to access and manage essential drayage information

EquipmentRepair

Connect to the world's largest maintenance and repair network

Facilitates the maintenance and repair (M&R) approval process between equipment owners and their service providers. The system can be used standalone or easily integrated with an equipment owner's existing M&R system, enabling operators to instantly create, approve, amend and complete repairs, reducing cycle times and increasing equipment utilization. Completed estimates are retained in the IAS Hub to benchmark

the cost and turn time performance of approximately 1,400 M&R depots around the world. EquipmentRepair speeds the estimate approval process, which vastly reduces the daily time needed to manage global M&R operations.

EventManager

Connect to any facility to track and manage transport events

Allows companies to exchange data easily with any intermodal facility to track any transport event using electronic data communications. Reduces data errors up to 90% by validating message format, content, coding standards, and customer-defined rules. When an error occurs, the system automatically notifies trading partners, minimizing resources required to track and correct data-related problems.

InterBox®

Connect to Intermodal Marketing Companies (IMCs) for domestic equipment repositioning

Enables IMCs to find and reserve ocean carriers' empty containers to facilitate domestic shipments. Rather than have the carriers reposition empty containers to the port, at a cost of hundreds of dollars per unit, IMCs reserve equipment and fill them with domestic cargo for the return trip. The service enables ocean carriers to automate the entire process from managing requests, wait lists, and approvals to rail billing. Each transaction can save an ocean carrier hundreds of dollars in repositioning costs and lowers the cost of domestic shipments for IMCs.

LeaseManager

Connect to your asset portfolio to manage lessor-owned equipment

Facilitates the entire asset management life cycle for equipment fleet and leasing companies, enabling them to manage their global inventory and track, measure and report on a wide range of metrics. LeaseManager is a turnkey lease management system that allows clients to consolidate information, standardize work processes, and identify revenue-generating opportunities.

Brokerage Services

With experienced brokers in key locations worldwide, IAS also provides solutions to help ocean carriers, equipment lessors and NVOCCs manage equipment imbalances around the globe.

InterChange

Connect to the world's largest network of equipment suppliers and receivers

IAS InterChange enables ocean carriers, container lessors and NVOCCs to interchange equipment between areas where surpluses and deficits exist worldwide. Clients provide IAS with location details of their equipment stock and experienced brokers use the data to create matches between equipment suppliers and receivers, providing customers in deficit locations with additional containers and helping those with surpluses to avoid costly repositioning. Clients can use the web to track and manage current bookings, request unit redelivery details, and instantly access on-hire performance reports. InterChange saves clients millions of dollars each year and a single one-way interchange can save both a receiver and a supplier hundreds of dollars per unit.

slotXchange®

Connect to ocean carrier vessel space to reposition empty containers

Enables ocean carriers and container lessors to manage their global equipment surpluses and deficits by matching empty containers with available 'slot space' on ocean-going vessels. With slotXchange, container owners retain control over their equipment and ensure that it is available for re-use as quickly as possible. Carriers with available slots can generate additional freight revenue of hundreds of dollars per TEU by filling empty vessel space.
