

IAS EquipmentRepair is a Software-as-a-Service (SaaS) solution that facilitates the maintenance and repair (M&R) approval process between equipment owners and their service providers.

Automate the M&R cycle

IAS EquipmentRepair can be accessed as a turnkey application via the web or easily integrated with an equipment owner's existing M&R system, enabling operators to create, approve, amend and complete repairs instantly, reducing repair cycle times and increasing equipment utilization. Completed estimates are retained to enable you to benchmark the cost and turn-time performance of your suppliers from among approximately 2,200 M&R depots worldwide.

IAS EquipmentRepair vastly reduces the daily time needed to manage global M&R operations and can yield a substantial savings from increased equipment utilization, productivity and efficiency.

Benefit from a proven solution

With more than a decade of experience building a leading portfolio of intermodal on-demand software solutions for the transportation industry, IAS has the global network, application solutions and technological infrastructure needed to continuously support thousands of users in countries worldwide. In fact, IAS has processed millions of estimates on behalf of the industry's leading equipment fleet owners and lessors.

Get connected to your partners quickly and easily

Connecting to repair facilities can be expensive and time-consuming – electronic data interchange standards are not consistently applied and limited technical resource availability can stall initiatives. IAS has the resources, skills and expertise available to connect you with your M&R service providers quickly and cost-effectively – whether you are connecting to 50 facilities or 500.

To simplify data connectivity, IAS SaaS solutions manage data flow between clients and their intermodal partners using IAS EventManager, a complementary SaaS tool that enables equipment owners to monitor electronic data transmissions easily, identify errors, and notify the data sender of issues automatically to allow them to correct problems.

IAS has also established working partnerships and communications processes with container depots, surveyors, and repair vendors worldwide, and understands what it takes to maximize cooperation and speed implementation. In fact, your partner facilities may already be connected – enabling you to begin experiencing the benefits of IAS EquipmentRepair sooner than expected.

Why EquipmentRepair?

Features:

- **Capture data via EDI or web-based entry**
- **Manage estimate and repair orders and workflows**
- **Integrate seamlessly with existing financial systems (e.g., SAP®, Oracle®)**
- **Share photos and documents**
- **Send automatic notifications and escalations**
- **Utilize 30+ standard reports**
- **Track and benchmark key performance metrics**

Benefits

- **Reduce M&R costs**
- **Increase productivity and efficiency**
- **Improve communications and customer service**

Connect to the world's largest maintenance and repair network

Streamline equipment maintenance and repair

Improve data accuracy

IAS validates and organizes critical M&R information – ensuring that equipment owners and M&R service providers alike are using accurate data. By supporting ISO codes and integration with client systems to perform sophisticated validations (e.g., warranty), IAS keeps equipment owners better informed about M&R-related issues. For example, IAS can verify that each container in an equipment owner's fleet actually belongs to the owner, or flag an estimate outside of an agreed-upon tariff. Additionally EquipmentRepair provides the following reports to manage the quality of data received from M&R service providers:

- Summary of depot reporting errors
- Quantity and type of errors generated per facility code

Increase equipment utilization

Equipment owners can use IAS EquipmentRepair to automate routine tasks – speeding the repair cycle and improving equipment turn times to help owners:

- Review, approve, amend, and cancel estimates online
- View estimate revision history
- Automate estimate approval based on client-defined rules
- Notify and escalate time-sensitive estimate and repair order activities
- Host standard repair tariffs online and check incoming estimates for accuracy – automatically flagging discrepancies

Make smarter business decisions

IAS provides a suite of online reports that enable M&R managers to make informed decisions using the most up-to-date and accurate information available, including:

- Exception reporting – including delay alerts and problem summary reports
- Dashboards – Provide graphical and configurable views of key performance information at local, regional, and global levels
- Variance between original and approved estimate costs
- Equipment awaiting approval or repair
- Summary of owner-approved estimates

Track and control costs

IAS enables equipment owners to access detailed operational, cost, and status information at both a macro level for budgeting and large-scale cost management, or at a micro level for estimate-by-estimate cost reductions. Data can also be compared across regions and M&R vendors, identifying business trends and variances:

- Average days between estimate date, approval date, and repair date
- Specific damages and the associated costs by ISO code
- History of equipment owner repair costs
- Summary of M&R costs by size, type, facility, currency, and time period
- ISO and custom code validation
- Third-party damage costs invoices

EquipmentRepair New Version

Completely rebuilt from the ground up and the result of a significant investment, EquipmentRepair 3.0 is intuitive, straightforward and designed to be simple. Dozens of new features have been added, including:

- Improved accuracy with real-time data validation. Errors are highlighted in real-time and may be corrected instantly when entering data online--preventing submission of bad data and eliminating delays in error correction.
- Ability to find, review and action estimates quicker than ever before, including instant quick-previews of estimate line items, estimate history, survey requests and more, directly from an advanced estimate management view.
- Increased efficiency with filters, configurable views and advanced searches that suit user work-flow.
- Advanced high performance reporting to obtain reports faster than ever. Instantly change report parameters and see the impact immediately. Export reports to PDF, Microsoft Excel, Microsoft Word, CSV Text File or even Flash with full formatting.
- Full online help with both help text, step-by-step visual guides and demonstration videos.

Personal 24/7 support

With support teams located in service centers worldwide, IAS provides access to knowledgeable professionals to help you keep your business moving. Whether you need assistance or have a service issue that requires technical support, representatives are available by phone or email to serve you worldwide.

About IAS

International Asset Systems (IAS) is the global leader in providing intermodal web-based applications and brokerage services. IAS's team of transportation professionals manage the world's largest intermodal information network, spanning thousands of operators and their trading partners including leading ocean carriers, 3PLs, NVOCCs, IMCs, equipment lessors, motor carriers, repair depots, and railroads. IAS helps clients profit more by reducing equipment, transportation and operational costs, increasing booking fulfillment, and achieving greater transport visibility. The company's suite of on-demand Software-as-a-Service applications can be operated as turnkey solutions accessible on the web or as integrated extensions of a client's transportation management system. Each application is based on industry best practices and can be implemented quickly, enabling clients to realize significant benefits immediately, while avoiding costly investments in technology and resources.
