

IAS InterChange enables ocean carriers, container lessors and NVOCCs to interchange equipment between areas where surpluses and deficits exist around the globe.

Boost revenue, maximize savings

IAS InterChange streamlines the equipment interchange process, significantly reducing container repositioning and lease costs for suppliers and receivers:

- **Suppliers** save money by improving container utilization, and balancing supply and demand; and
- **Receivers** increase profits by using equipment free of charge.

InterChange saves IAS clients millions of dollars each year, and a single one-way interchange can save both a receiver and supplier hundreds of dollars per container.

Increase asset utilization

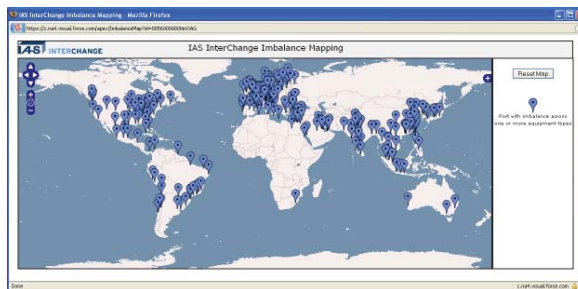

When a container is repositioned by a receiver using IAS InterChange, it can be

returned to the supplier quickly – often within the free days included with any exchange. During the process, IAS provides end-to-end transactional support to reduce the administrative burden and smooth the transition from on-hire to off-hire.

Find more opportunities with expert brokers

IAS’s team of experienced, multilingual brokers understand global and regional trade patterns and use exclusive web tools to track equipment surpluses and deficits around the globe. Constant updates from the industry’s largest network of suppliers and receivers ensure that IAS InterChange brokers have current information to target the most optimal exchanges of equipment. Because the information is readily available to IAS brokers all the time, you get more relevant matches quickly, allowing you to save more money.

Experienced brokers track global equipment imbalances on the web and can instantly identify meaningful interchange opportunities worldwide.

Why InterChange?

Features

- Track and manage equipment on the web
- Simplify the interchange process using a standardized agreement
- Centralize billing and settlement
- Leverage proven risk management guidelines
- Enjoy 100% protection against lost equipment
- Capture complete transaction details

Benefits - Suppliers

- Reduce container repositioning costs
- Access more receivers

Benefits - Receivers

- Receive free use of equipment
- Reduce container lease costs
- Increase revenue
- Fulfill customer equipment demand

Connect to the world's largest one-way equipment network

Access interchange information on-demand

Lack of booking information used to mean a supplier or receiver had to wait to speak with their broker to make booking and equipment inquiries. This method cost parties valuable time, underscoring the need for more timely and accurate information to reposition equipment promptly. IAS InterChange solves this problem by enabling suppliers and receivers access to essential information on the web, reducing the time usually required to make decisions. And, after an interchange is arranged, the receiver of the container can instantly request redelivery details on the web for faster and better equipment management.

View and manage your interchange transactions

IAS InterChange is the only equipment interchange service that offers visibility of your transactions with a convenient, web-based Software-as-a-Service (SaaS) solution. Once your interchanges have been confirmed by your IAS broker, the information is immediately available on

the web, allowing you to manage your interchange information anytime, in real-time. Whether you want to view a summary of your open, pending and closed bookings or managing billing, IAS provides powerful and easy-to-use web tools that enable you to:

- View a summary of your transactions using a dashboard console
- Manage pipeline and billing with detailed reporting
- Create bookings and submit inquiries
- Request redeliveries
- Search for bookings and equipment

InterChange reduces congestion and pollution

Each InterChange transaction helps contribute significantly toward reducing the environmental effects of transportation by lowering congestion at ports, container facilities and roadways and reducing noise and air pollution.

Each InterChange transaction saves:

- 0.45 tonnes of fuel per container
- 1,200 kg of CO₂ emissions – equivalent to powering and heating a home in the USA for 2.5 weeks[†]

Personal 24/7 support

IAS provides access to knowledgeable professionals around the clock to help you keep your business moving. If you have a booking issue, or are looking for on-hire information or off-hire instructions, IAS representatives are available by phone or email to serve you worldwide.
